Personal Bank Ledger and Statement Generator

Abstract

The **Personal Bank Ledger and Statement Generator** is a Java-based application designed to maintain and generate a simple personal banking record.

The system allows users to enter account details, opening balance, and multiple financial transactions. For each transaction, the user can specify the **description, payment type, transaction type, and amo**unt. The program automatically calculates the updated account balance, total deposits, and total withdrawals while preventing withdrawals that exceed the available balance.

Finally, it generates a formatted bank statement displaying all transaction details and the closing balance.

On developing this program, it helps the user to **avoid paper work**, it **saves lot of time** for user, it **minimises wrong entries**. It also provides an organized and reliable method for maintaining records and generating useful reports.
